What is substance use disorder (SUD)?

A disease that causes people to seek a “high” from substances or medications, no matter what the consequences.

If you or a loved one are experiencing signs of substance use disorder, call the Helpline to start the journey to recovery. It's an important and courageous first step toward hope and healing.

Call the 24/7 Substance Use Treatment Helpline at **1-855-780-5955**, to get help today—hope and healing are closer than ever.

Signs of substance use disorder:¹

Some common signs of substance use disorder include:

- Mood swings or unexplained personality change
- Ignoring responsibilities
- Sudden changes in friends
- Changes in appearance including a lack of hygiene
- Feelings of shame or regret
- At risk of financial loss or physical danger

Opioids: What you need to know.

The opioid epidemic has become so serious it's been declared a public health emergency. Approximately 2 million Americans struggle with substance use disorder, and every 16 minutes someone dies from opioid overdose.^{2,3}

The Substance Use Recovery Advocates can give you or a loved one information about opioid use and arrange a professional evaluation. They can also help find medication-assisted treatment (MAT) options from a nearby network provider.

Risk factor signs.

If the answer is yes to 3 or more of the below questions, there may be risk for substance use disorder.¹ To find out if treatment is the right next step, call the confidential Substance Use Treatment Helpline at **1-855-780-5955**.

Common risk signs of substance use disorder:

- Do I keep my use a secret from others?
- Do I tell myself my problem isn't that bad?
- Are friends, family, or coworkers concerned?
- Have I ever had a blackout (memory lapse) after using?
- Do I find any excuse to drink or use?
- Do I feel regret or shame after using?
- Do I use to change the way I'm feeling?
- Do I spend more money than I can afford on alcohol or drugs?
- Is my use increasing?
- Am I at risk of physical danger or financial loss?
- Do I make promises to stop or cut back, but never follow through?
- Do I look forward to using alcohol or drugs?

About medication-assisted treatment (MAT).

Most people are able to take prescription opioids for pain without serious problems. But some struggle to use their medication correctly. This can lead to a substance use disorder (SUD). SUD causes people to seek a "high" from medications, no matter what the consequences. Sometimes people who can't get their prescription medication anymore turn to cheaper opioids like heroin. Heroin addiction affects more than half a million people.⁴

Research shows that medication-assisted treatment (MAT) is the most promising treatment for people with a SUD.⁵ MAT uses medications that control withdrawal symptoms and cravings. Some people may need to stay on these medications for a long time. This gives them time to recover and reduces the dangers of relapse. When medication is combined with counseling and other support, it is very effective and can help people recover and resume a productive life.
